# Problem Statement

Develop a user-friendly web application platform that connects elderly individuals with caregivers, family members, and health professionals for remote assistance. The platform should offer daily task reminders, video calling, health tracking, emergency alerts, and access to a marketplace of verified caregivers to ensure their safety and well-being.

# Key Features

- ▶ Caregiver Marketplace
- ▶ Daily Reminders
- ▶ User Friendly Interface
- ▶ Health Monitoring
- ▶ Appointment Management
- ▶ Chatbot

# Business Model

CareMate aims to address the growing demand for elderly care services while providing a sustainable revenue model. The application will operate on a commission-based structure, where 15% to 30% of the service fees will be retained by CareMate, and 70% will be allocated to the caregivers. This model ensures that caregivers receive fair compensation while allowing CareMate to maintain and enhance its platform.

# Future Features

The addition of the Emergency Alert System, Dark Mode, Subscription model, and Multilingual Support highlights CareMate's commitment to providing a safe, user-friendly, and inclusive platform for elderly individuals and their families. By focusing on these features, CareMate aims to enhance the overall user experience and ensure that seniors can navigate their health and well-being with ease.
